WiebeTech's Digital Forensic Solutions Save the Day on '24'

VANCOUVER, WA – April 7, 2010 – Digital forensic solutions from [WiebeTech™](#), a brand of [CRU-DataPort®](#), help save the day in the 8th season of Fox's 24, starring Kiefer Sutherland as America's favorite protagonist Jack Bauer and his unconventional CTU computer mastermind Mary Lynn Rajskub as Chloe O'Brian. After an electromagnetic pulse, CTU communications and surveillance are disabled by terrorists in order to sneak a radiological dispersal device into Manhattan. To facilitate recovery to the CTU server, Chloe utilizes various WiebeTech forensic solutions including the Forensic Field Kit and the Forensic UltraDock™. Meanwhile, NSA agents wearing USB WriteBlockers interfere with her savvy problem-solving.

Forensic Field Kit is the industry's premium comprehensive kit for digital forensic field examinations that include a Forensic UltraDock, Drive eRazer, Adaptors and everything else needed to acquire data outside the lab all in a durable Pelican™ case. Modern forensic investigators certainly know write-blocking is an essential part of the examination process that helps preserve the chain of evidence allowing investigators to testify in court to the quality and integrity of the data. WiebeTech provides several tools that offer read-only access to suspect hard drives through eSATA, USB or FireWire 800/400 interfaces for maximum versatility to accomplish this task. USB WriteBlocker is the smallest and most economical device on the market that captures and images 20-25% faster than competing products.

Additional forensic tools you may spy are the HotPlug that allows investigators to seize and move a computer without powering off, ToughTech™ Secure mini-Q pocket drive with encryption and AES Key Programmer to create and manage security keys. CRU-WiebeTech will display their leading forensic tools and removable and mobile data security solutions at IACIS April 27, 2010 in Orlando, FL, CEIC May 24-27, 2010 in Summerlin, NV, and Techno Security June 6-9, 2010 in Myrtle Beach, SC. About CRU-DataPort

Founded in 1986, CRU-DataPort is a pioneer in data security and data mobility devices. The company's flagship DataPort®, along with Data Express® and RhinoJR® (formerly manufactured by StorCase), and WiebeTech™ product brands of removable and external hard drive enclosures are the de facto standard for physical data security and safe data transporting in government, education and business markets. CRU-DataPort products are also widely used in media rich data environments including audio/video production, digital cinema, video security capture, and disk-2-disk backup and archiving applications. CRU-DataPort products are available through major distributors, PC manufacturers, specialty system builders and resellers globally.
